

Ministry/ Organization name: Amazon Web Services

Problem Statement : Tourism simplified through voice

Team Name : TEAM Y.A.A.N.

Team Leader Name : Ashish Abhishek Minz

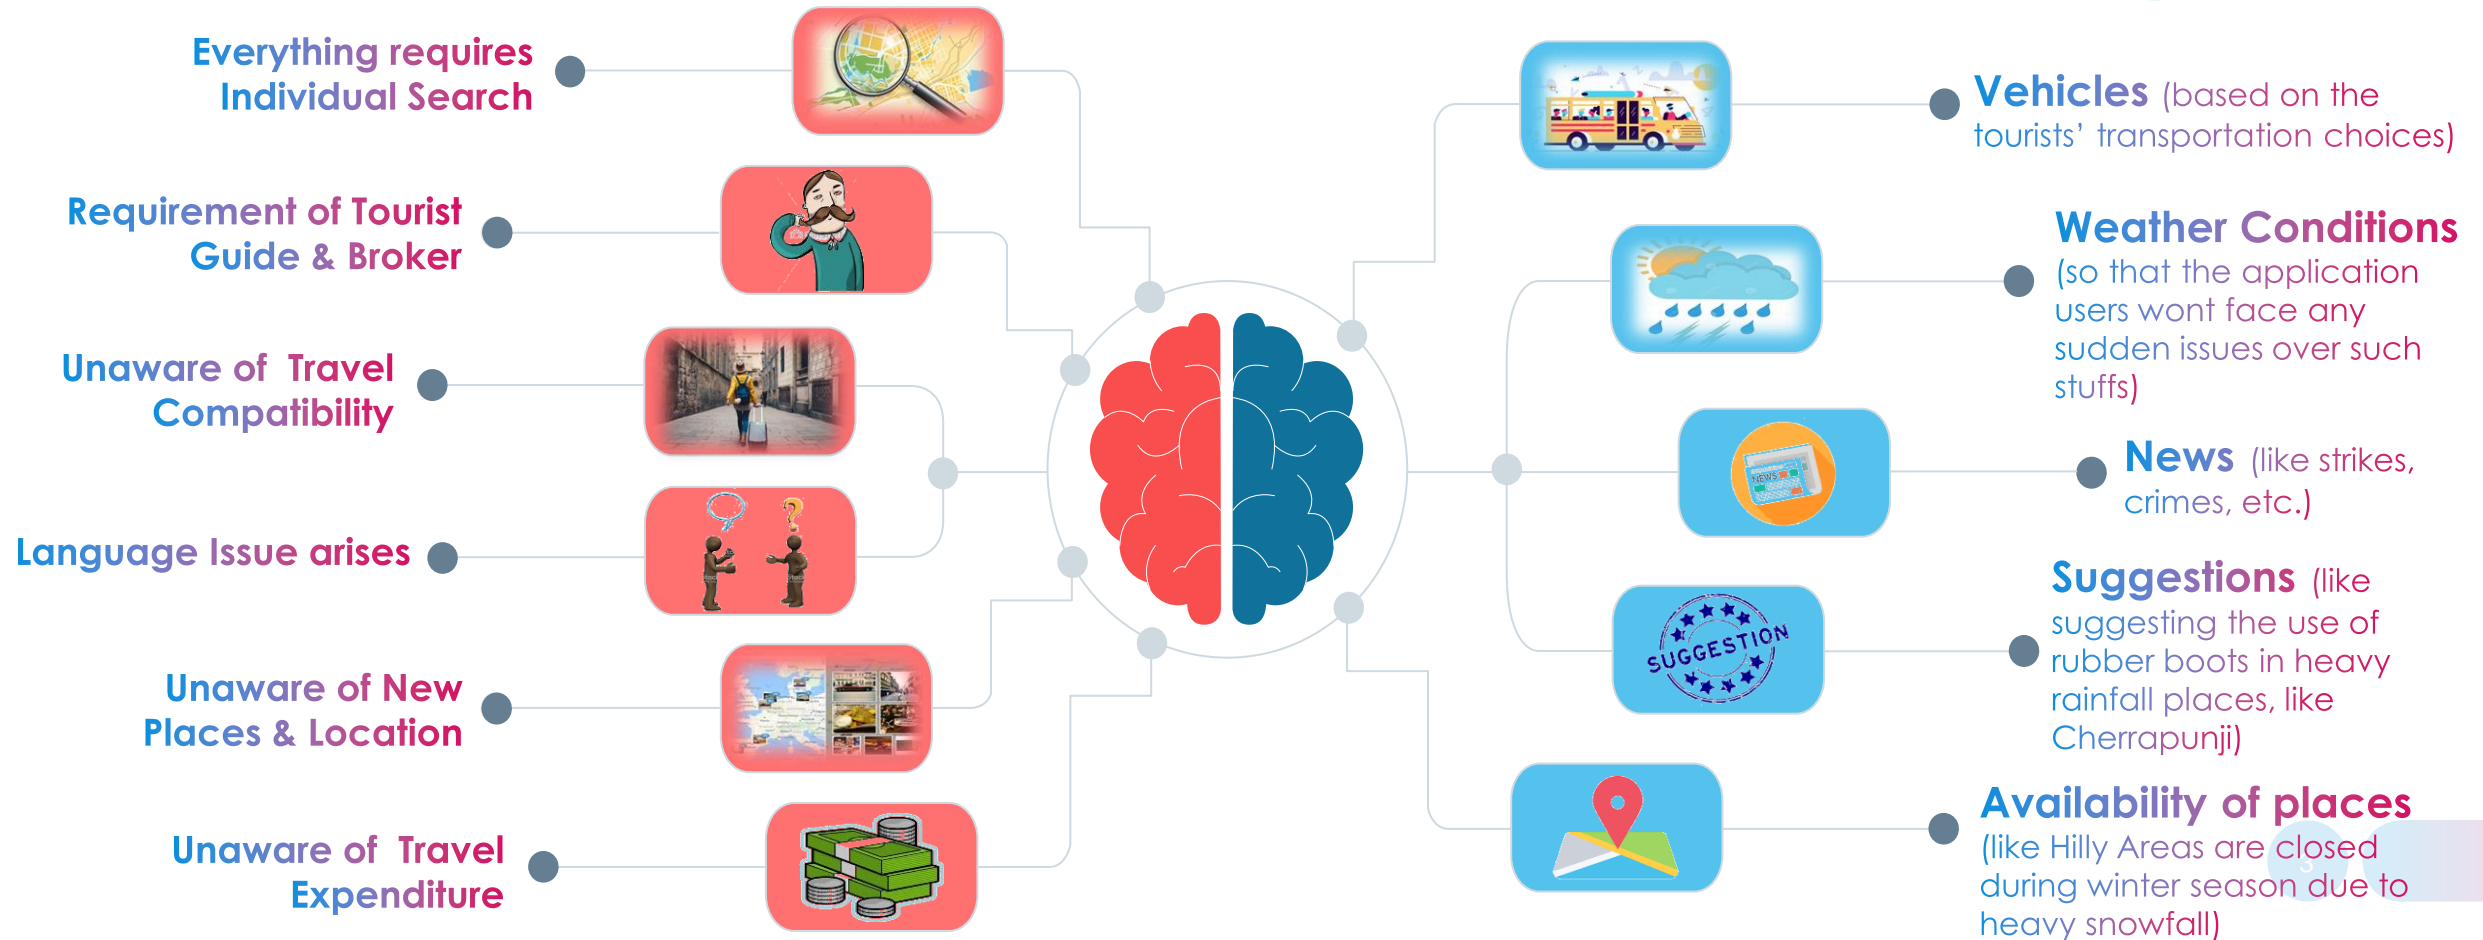

Team members: Debraj Karmakar, Debajyoti Ghosh,
Tarpan Das, Vishal Kashyap, Yachna
Raj

Problem Statement:

- Alexa is Amazon's cloud base voice service, that helps users interact with brands, data, and business logic through voice.
- Use Alexa to innovate, and build the next generation of interfaces for tourists in India.
- Your solution should help solve pain points of tourists coming to India like
 - voice forums to crowd source destination reviews, GPS based voice navigators to guide tourists at historical sites, SOS and emergency support solutions for local and international travelers, travel guides with entry prerequisites, government policies, visa needs, and recommendations on seasons to visit.
- The Alexa based solution should be intuitive to use also cater to the physically challenged travelers in India.

Problem vs Idea

Location Sharing

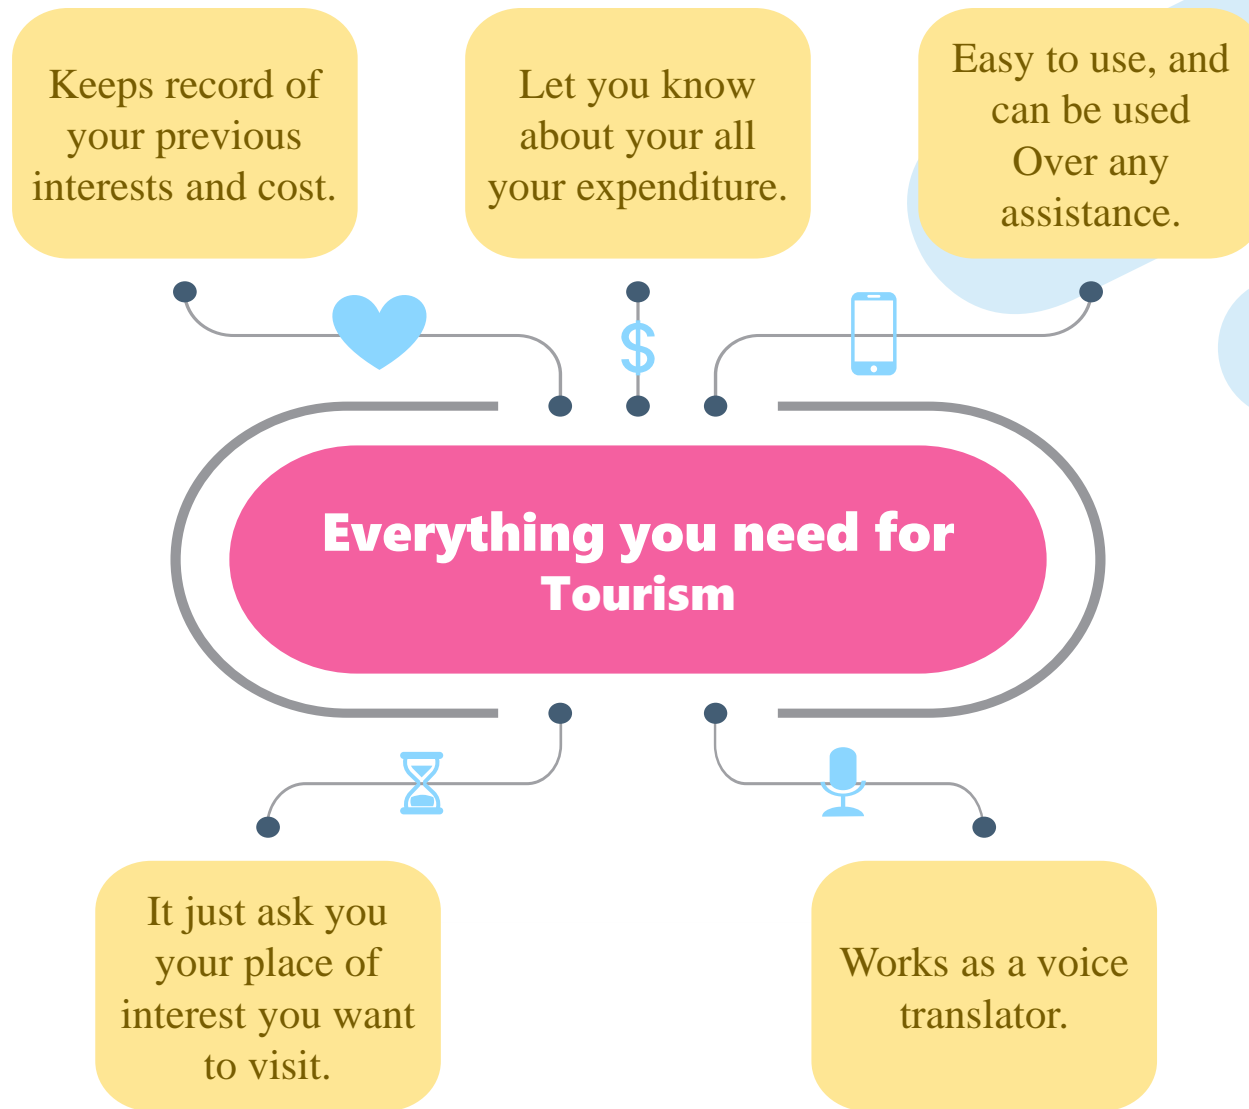

Technology Stack & Dependencies

For physically challenged people: those who are independent on a person, we will provide them with a helper.

For blind, deaf and dump: Alexa is a fully voice controlled feature where one can only listen and experience tour. And this can also be used through our mobile app too.

Future Scope

Extending our services by improving the portal through various booking websites.

We can Expand our portal to national and international travel agencies.

Adding man power for **Physically challenged people.**

By developing our AI we can come up with fully voice control system that would follow your command on the go.

We can add on a device which will take every prospective of Tour and Tourism.

Improvise this thing in Humanoid i.e., Human assistance robot.

THANK YOU!
